

schedule.pdf

Note: The stories with 'Back-end' appended were due to a miscommunication with a TA where we thought we were supposed to split stories into front-end and back-end. The front-end complements were completed in an earlier sprint.

Task	Dependency
Create Posts	User, company, and partner profiles.
Partner Profile Back-end	User Profile
User Profile Back-end	Log-in/Register
Filtered Search	User Profiles
View Feed	Create Posts
Finalizing Front-end	
Comment/Upvote Posts	Create Posts
Log-in/Register Back-end (Users, companies, investors)	
User Search	User, company, and investor profiles.
Admin page back-end	User, company, and investor profiles.
API-Documentation	Admin page back-end
Company Profile Back-end	User Profile

For this sprint, we identified our critical path as shown in the diagram as reaching API-Documentation meant that we were able to complete our main tasks, which involved creating accounts, and having administrator access to them. In order to stay on schedule we prioritized most of our manpower on creating the necessary endpoints for log-in, registration, and profiles, for users, companies, investors, and admins, before creating their documentation. We were unable to finish finalizing the front-end, viewing feeds, and commenting on posts. This was due to additional requirements appearing and the requirement of conformity wasting precious time. Fortunately they were not within our

critical path, so it was not prioritized as heavily.
