Direct Messaging between users	
View company profiles as a partner (company analytics)	
Watch E-Learning content	
Leaving comments on e-learning content	Watch E-learning content
Liking e-learning content	Watch E-learning content
E-Learning landing page	Administrator control over e-learning content
Administrator control over e-learning content	Watch E-Learning content

For this sprint, we identified our critical path as shown in the diagram as e-learning content was the main focus of this sprint. This involved both uploading and getting videos that were stored in the database. Furthermore, for version one of the AIC app we intend on only African Impact Challenge Group members (admins) being able to upload videos, so it is necessary for them to have control over videos. Additionally, we had other parameters for videos such as leaving comments and liking said videos. However, we also had several other tasks we wanted to complete. These were leftovers from sprint 2 in regards to connecting the front-end and back-end for profiles and commenting/upvoting posts. Finally, in order to satisfy the minimum amount of features, we began working on direct messaging between users.
